

GA-104

Gel Strong Base Anion Exchange Resin

Product Description & Applications

G-ion GA-104 is a Type II, gel strong-base anion exchange resin with high capacity and excellent regeneration efficiency, supplied as spherical beads in the chloride form. It removes all ions including silica and CO2, anyway, it operates best on waters having a high percentage of strong acids (FMA).has high capacity, shock resistant with high physical stability.

G-ion GA-104 is intended for use in all type of dealkalization, demineralization, deionization and chemical processing applications.

Hydraulic properties

Pressure Drop:

The graph above shows the expected pressure loss per foot of bed depth as a function of flow rate at various Temperatures.

Backwash:

After each cycle the resin bed should be backwashed at a rate that expands the bed 50 to 75 percent. That will remove any foreign matter and reclassify the bed. The graph above shows the expansion characteristics of Pure G-ion GA-104 in the sodium form.
